

SME Operations Project — Data Dictionary & Schema Document

Project Domain: SME Business Performance, Sales, & Financial Logistics. **Scale:** 200,000+ Enterprise Transactional Records. **Schema Architecture:** Decoupled Power Query Analytic Schema

Comprehensive Column Index & Business Logic Definitions

No	Column Name (Exact)	Data Type	Enterprise Business Definition & Analytical Purpose
1	Payment Method	Text	The financial channel used to settle the transaction (e.g., Credit Card, Digital Wallet, Bank Transfer, MFS). Used for cash-flow liquidity analysis.
2	Order Status	Text	The real-time fulfillment state of the order (e.g., Completed, Pending, Cancelled, Processing). Crucial for calculating conversion and failure rates.
3	Product Return Reason	Text	Categorical root-cause logs for customer-initiated returns (e.g., Defective, Wrong Size, Latency). Critical for product quality control and minimizing revenue leakage.
4	Stock Level / Inventory Quantity	Whole Number	The real-time physical count of specific items available in the warehouse ecosystem. Used to monitor asset carrying behaviors.
5	Reorder Point	Whole Number	The predefined safety inventory threshold that automatically triggers a procurement request to prevent stockouts.
6	Safety Stock Level	Whole Number	The extra cushion inventory kept in reserve to mitigate risks of sudden demand spikes or supplier lead-time disruptions.
7	Warehouse/Storage Location	Text	The specific regional supply chain fulfillment center or inventory hub responsible for storing and shipping the items.
8	Supplier ID	Text / Key	The unique alphanumeric identifier assigned to external B2B manufacturing vendors for structural supply chain mapping.
9	Lead Time (Days)	Whole Number	The exact temporal window spanning from the initial purchase order generation to physical arrival at the fulfillment hub.
10	Shipping/Delivery Date	Date	The formalized timestamp tracking when the final product was dispatched from the warehouse or signed over to the logistics partner.
11	Delivery Delay (Days)	Whole	A calculated logistical metric representing the

No	Column Name (Exact)	Data Type	Enterprise Business Definition & Analytical Purpose
		Number	variance between the expected delivery timeline and the actual fulfillment execution.
12	Transport Mode	Text	The logistical modality used for product distribution (e.g., Air Freight, Sea Shipping, Ground Express). Vital for optimizing holding costs.
13	Supplier Reliability Score	Decimal / %	A normalized scorecard index rating external vendor compliance based on promptness, quantity accuracy, and SLA maintenance.
14	Defect Rate (%)	Decimal / %	The statistical percentage of sub-standard or ruined items discovered within incoming batches from specific suppliers.
15	Social Media Engagement	Whole Number	Granular user interaction counts (likes, shares, clicks) captured via marketing APIs. Blended to gauge campaign-driven revenue performance.
16	Customer Reviews Sentiment Score	Text / Decimal	Granular feedback mapping categorized into structural vectors (Positive, Neutral, Negative) to correlate market sentiment with margins.
17	Website Traffic Source	Text	The acquisition channel generating the inbound user session (e.g., Organic Search, Paid PPC, Direct, Referrals) to calculate attribution.
18	Is Holiday / Event	Binary (0/1)	A temporal boolean flag indicating whether the transaction happened during peak macro events or national holidays to isolate seasonal surges.
19	Season/Quarter	Text	Chronological macro-windows (e.g., Q1, Q2, Q3, Q4) used to monitor business cycles and seasonal corporate performance.
20	Economic Indicator	Decimal	Macro-environmental metrics (e.g., Inflation rates, consumer confidence indexes) mapped to evaluate external financial constraints on SME growth.
21	USD Convert Rate	Decimal	The spot exchange rate applied during the Power Query ETL phase to normalize localized currencies (BDT, INR, EUR) into global standards.
22	CAC in USD	Currency	Customer Acquisition Cost. The total marketing and sales expenditure required to acquire that specific transaction or customer entity.
23	Unit Price USD	Currency	The baseline standardized retail value assigned to a single product unit, priced globally in United States Dollars.
24	Total Amount USD	Currency	The baseline financial top-line gross revenue generated by the line item, normalized cleanly through Power Query transformation logic.
25	Cost of Goods Sold (COGS) USD	Currency	The total cumulative direct cost (manufacturing, procurement, labor) required to create or source the inventory sold in the transaction.

No	Column Name (Exact)	Data Type	Enterprise Business Definition & Analytical Purpose
26	Net Profit Margin USD	Currency	The ultimate bottom-line financial yield calculated dynamically: $\text{\text{Total Amount USD}} - (\text{\text{COGS}} + \text{\text{Tax}} + \text{\text{Carrying Costs}})$.
27	Tax/VAT Amount USD	Currency	The standardized consumption tax assessment computed over the gross value, varying strictly by regional compliance framework requirements.
28	Carrying/Holding Cost USD	Currency	The incremental storage overhead expenses incurred (warehousing space, insurance, obsolescence) by retaining inventory items in stock.
